## Helping Hand

This is just a drawing of the many things that a human hand can do. When many hands of skill get together there is no limit to what can be accomplished!

# Kiera Lord North Reading HS Grade 12

## Connected by Light

For this piece, I wanted to convey how electricity powers many different establishments and connects all aspects of life together. I added in a few different landmarks that had been shut down during the pandemic, such as the stadium and the theater to show how we are returning to the things that we love. Although the pandemic may have been long and difficult, the versatility of our technology will bring us back together again.

Grade 11

## A Bright Idea

The artwork shows the versatility and many uses of electricity. It highlights sustainable practices such as solar panels and wind and the growth and greenery it leads to. This artwork also shows various people, all physically separated, but through the use of electricity, they can all still communicate and thrive. This connection (as shown by the bolt of energy), can light up the dark times we have all been through.

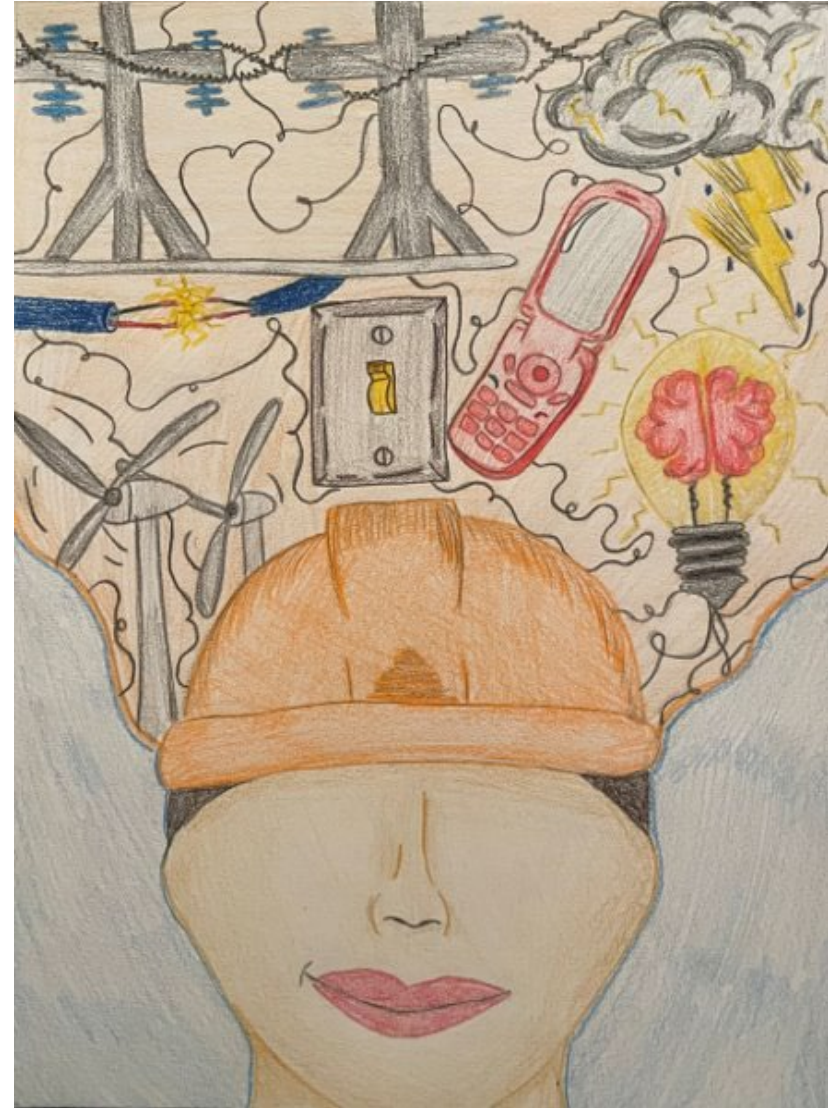

Carina O' Donnell  
Wilmington HS  
Grade 11

## The Wired Mind

My drawing represents the versatility of electricity in everyday life. In our lives we use electricity more than we think. I drew an electrician whose mind is filled with all the different ways electricity is used. From a lightning bolt to a phone, electricity is the most versatile thing we use today.

Grade 11

## Lamp Post

Since versatility means the ability to adapt to many different functions, I have a lamp post doing that. This happy lamp post is lighting up the street like usual. But, he is also on his laptop and his phone.

## Bright Ideas, Dark Thoughts

This is a digital art piece that features a woman with a light bulb deep in her eye socket. It is lighting up the inside of the head, and casting light in the darkness. It shows the importance of remaining hopeful and open to change.

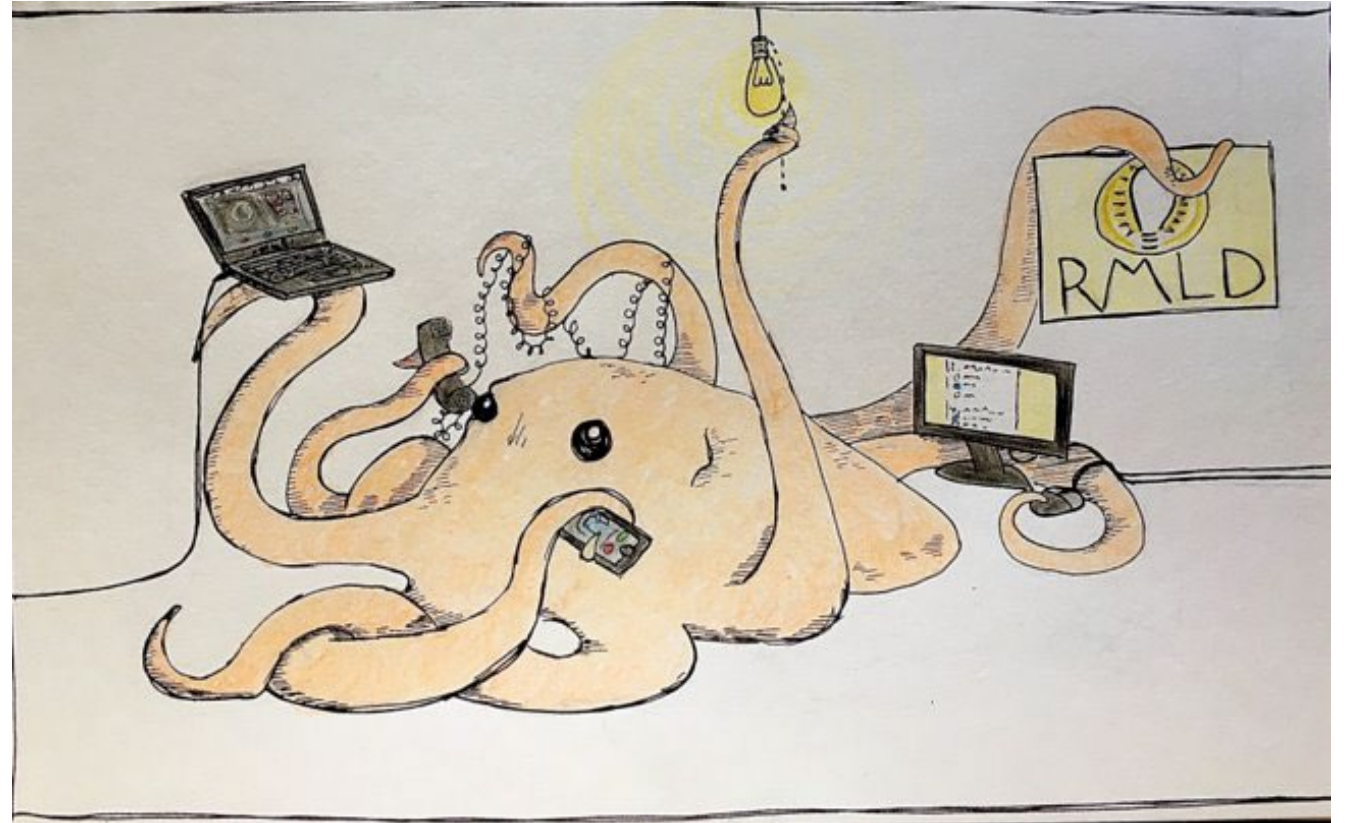

# Kat Ines North Reading HS Grade 11

## Multitasking

For my entry I tried to represent the ways electricity is essential to our work, school, and personal lives, whether that be through attending important meetings online, remote learning, or just keeping in touch with friends and family. It's easy to forget, but taking a short look around your home will make it apparent just how much we rely on electricity to power our lives.

# Caitlin Nickerson Reading Memorial HS Grade 12

## Adapting

Versatility- ability to adapt or be adapted to many different functions or activities. The first thing that came to mind when I heard this word was adapting. In the animal kingdom, the evolution and survival of the fittest play an important role. The first animal that comes to my mind when I think of adapting to one's surroundings is a chameleon. Chameleons change color to camouflage for survival. The quote beautifully encompasses the idea that adapting to things around you can be small yet make the most difference. My artwork shows that simple idea with the chameleon blending in with the leaf, adapting to its surroundings, continuing to survive another day.
